

AMS Optics

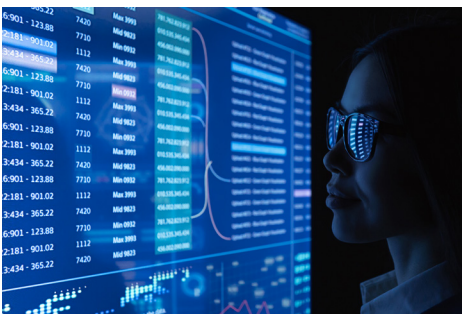

Enterprise-level software that drives real operational improvement by unifying data, systems and people.

AMS Optics Gives You the Power to:

Simplify Data Management and Drive Business Improvement

Reduce data complexity and establish a sound data foundation for your digital transformation initiatives with a centralized, open IT/OT data solution that seamlessly and securely connects to, aggregates, and contextualizes operations data, using cloud or on-prem technology.

Ensure Operational Uptime and Optimize Performance

Gain improved operational visibility by leveraging analytics to provide real-time actionable insights delivered directly to the people who need them, making it easier to address issues and drive performance in areas such as safety, production, reliability, and sustainability.

Foster a More Informed, Productive Workforce

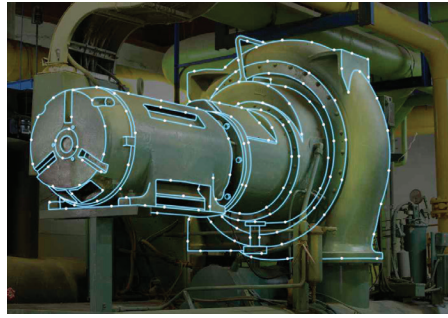

Help personnel—on and offsite—make more informed decisions about operational health and performance by providing them with collaborative support, easy access to knowledge and tools that enhance situational awareness and automated workflows that generate appropriate workorders and validate responses.

With AMS Optics, you can drive results by:

- Ensuring your technology is tied to your desired business outcomes
- Easily integrating new technology into your existing infrastructure and scaling solutions to multiply success
- Quickly generating ROI through focused solutions to your most pressing challenges

Connect to all of your operations data through a single, unified management interface.

Organize multiple forms of data in context to the asset and its place in the overall enterprise so that it's ready for use.

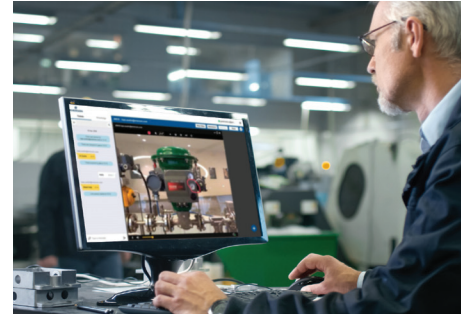

Conduct safer, more efficient data aggregation by optimizing the load on OT systems to prevent disruption to operations.

Gain enhanced visibility into operational health and performance and generate real-time actionable insights.

Transform traditional workflow practices to fully digital, automated procedures that include creating, tracking, prioritizing, executing and validating actions.

Collaborate with experts, on demand, to accelerate work and guide procedures.

Securely deliver prioritized content such as health alerts and KPIs to relevant personnel, on- or off-premise.
